
CAPABILITIES STATEMENT

Capabilities Statement

CakeBoxx Technologies, LLC is a Supply Chain Systems Engineering company headquartered in McLean, Virginia. CakeBoxx is dedicated to supply chain innovation - improving transportation and storage systems for complex and mission-critical payloads that support global trade and development.

We apply our operational supply chain experience and technical skills through a sophisticated systems engineering approach, developing innovative, practical solutions to meet global transport challenges. Our lens is focused on delivering solutions that address our customers' business needs for visibility, sustainability, resiliency, and operational risk management when transporting and storing mission critical cargos.

Socio-economic Status: Small Business

Unique Entity ID: NUEDU8FJH6X6

DUNS Number: 967784096

CAGE/NCAGE: 6BX65

NAICS Codes:

332312 332311 332439 336212 484121

531130 541330 541613 541614 541618

Our scope of products and services includes:

Supply chain transportation operations and ecosystem analysis

Cargo handling and transportation equipment needs analysis

Shipping container and transport platform design and manufacturing

Innovative two-piece intermodal shipping container solution development for out-of-gauge cargos

Cargo loading/unloading equipment and processes analysis, including cargo securement option development

Specialized cargo transport and storage solution development, including manufacturing feasibility assessment

Cargo and transportation monitoring and visibility systems.

Special Application Containers

Think It - Build It

We work with our customers to design and build completely customized transportation solutions for special applications.

To keep supply chains humming, we solve transportation and storage problems for the evolving spectrum of complex cargos that need to be transported and stored. We THINK about our customers' cargo and their challenges, then we BUILD a solution to solve them.

Our engineers custom-design container products for single application or wide-spread industry use - including two-piece CakeBoxx® containers, side opening containers and other innovative designs to secure sensitive cargos in a broad range of environments.

Transportation Platforms Built to Spec

CakeBoxx Technologies produces decks and special transport platforms as standalone solutions.

The deck of a CakeBoxx two-piece container is a super strong and versatile platform, perfect for the transport of heavy and unwieldy cargos. It can be used independently of the lid much in the same way as a flat rack where required and can be stacked in multiples for easy return transportation. Additionally, CakeBoxx Technologies designs complete custom transport platforms to suit any requirement. A range of flat racks with folding posts are also available to spec.

In addition to use for transporting any number of different heavy, awkward-shaped cargos, decks and platforms also suit a variety of other uses. These include as sump trays for containers, as platforms for the installation of data centers, and many other special applications.

CakeBoxx[®] Standard Containers Integrating Seamlessly

In addition to custom containers and transport platforms, CakeBoxx Technologies offers a standard product line of two-piece shipping containers in lengths between 20ft and 53ft.

The key feature of every CakeBoxx two-piece container is the unique deck and lid construction. In addition to making cargo loading and unloading a simpler and safer task, the deck and lid design seals and secures the container contents entirely, making unauthorized access and theft virtually impossible.

The TrusDek[®] Series is the latest CakeBoxx deck technology and comes as standard on all CakeBoxx container types, sizes and configurations.
